WaterFurnace Introduces Envision™ NSW Series 1.5- to 6-ton Hydronic Units
New Series Can Reduce Annual Water Heating Costs by 60 Percent

Fort Wayne, IN – WaterFurnace International, Inc., a leading manufacturer of residential, commercial, industrial and institutional geothermal and water source heat pumps, introduces the Envision™ NSW Series hydronic units. Available in 1.5- to 6-ton capacities, the new units combine the comfort and versatility of hydronic heating and cooling with the technology and efficiency associated with the WaterFurnace Envision Series.

Designed to efficiently provide hot water for radiant floor heating, domestic hot water, pool heating and snow and ice melt, NSW hydronic units can reduce hot water costs by as much as 60 percent per year. In addition, NSW units are capable of providing chilled water for cooling applications.

NSW units feature a microprocessor that controls the load pump, source pump and compressor pump. A robust controller enables the user to view all modes of operation and easily adjust temperatures. In addition, the controller monitors all fault conditions to ensure safe, reliable operation and includes an LCD screen that displays current temperature and settings.

The units' high efficiency scroll compressors reduce operating costs and improve reliability, while sound attenuating compressor blankets and double-isolation mounting plates ensure quiet operation. All units use environmentally friendly R-410A refrigerant and feature ThermaShield™ foam insulation to increase the efficiency and consistency of the heat exchangers.

Outside, NSW cabinets feature heavy gauge steel with a durable metallic finish for long-lasting beauty and protection. A swing-out control box and control panels that can be placed on either side improve serviceability.

Larger NSW units can include a Desuperheater to provide supplemental heating of potable water while simultaneously providing space heating. In addition, a HydroZone tank controller accessory can be used in conjunction with a WaterFurnace GeoTank™ to add advanced features like outdoor reset and unit staging that save energy and money.

For additional information about the Envision NSW Series from WaterFurnace, visit www.waterfurnace.com or contact your local WaterFurnace representative.

WaterFurnace International, Inc.

WaterFurnace International, Inc. is a leading manufacturer of residential, commercial, industrial and institutional geothermal and water source heat pumps. Products from WaterFurnace include energy-efficient and environmentally friendly geothermal comfort systems, indoor air quality products and pool heaters. WaterFurnace (TSX:WFI) was founded in 1983, the company is headquartered in Fort Wayne, Ind.
