Versatec Ultra Single Hydronic heat pump from WaterFurnace features Aurora controls and efficient operation

Fort Wayne, IN – [WaterFurnace International, Inc.](http://www.waterfurnace.com), the leading manufacturer of [geothermal](#) and water source [heat pumps](#), introduces the [Versatec Ultra Single Hydronic](#) heat pump.

Like other units in the Versatec family, this upgrade to the commercial Envision® NSW unit features Aurora base controls to ensure safe, reliable operation. The modular design of Aurora communicating controls allows for application flexibility and expandability while offering traditional safety sensors that include high/low pressure, condensate overflow and freeze detection, both on the loop and load side.

With an energy efficiency ratio (EER) of 14.0 to 17.5 and a coefficient of performance (COP) of 2.9 to 3.1, the Versatec Ultra Single Hydronic heat pump combines scroll compressors, R-410A refrigerant and oversized heat exchangers to provide exceptional energy savings in commercial applications. The unit's wide range of operating temperatures, compact size, reversible control box and piping enable the heat pump to be used in a variety of applications. These include pool/spa heating, radiant floor, snow melt, aquaculture and process water installations. Versatec Ultra units can be used for heating only, cooling only (field converted for chilled water applications) or heating/cooling.

The Versatec Ultra Single Hydronic heat pump also features a heavy-gauge steel cabinet finished with a durable, corrosion-resistant, polyester powder coat paint for years of service.
