WaterFurnace announces return of SEVENbration savings event

Homeowners can save \$2,000 on the 7 Series variable capacity geothermal heat pump and receive free Symphony home comfort platform

Fort Wayne, IN – [WaterFurnace International, Inc.](#), the leading manufacturer of [geothermal](#) and water source [heat pumps](#), announces the return of [SEVENbration](#), a celebration of the success of the highly efficient [7 Series](#) variable capacity geothermal heat pump. From July 10 through December 15, homeowners can receive an instant rebate of \$2,000 through participating WaterFurnace dealers. New to the SEVENbration this year is the addition of a free [Symphony](#) home comfort platform for each SEVENbration package purchased.

The 7 Series is the first variable capacity geothermal unit available for homeowners and surpasses 41 EER in cooling and 5.3 COP in heating, efficiencies twice that of traditional air conditioners or heat pumps and 30 percent greater than current geothermal units. The unit utilizes a soft-start variable capacity compressor, in concert with a variable speed ECM blower and variable speed loop pump. This allows the unit to scale output to exactly the level needed rather than the “high” or “low” speeds found in normal systems.

“SEVENbration is a great time to make the switch to geothermal,” said Tim Litton, WaterFurnace director of marketing communications. “Thanks to the breakthrough efficiencies of our variable-speed 7 Series unit, thousands of homeowners have saved millions of dollars on heating, cooling and hot water. Combined with available local incentives and year-round savings on utility bills, the SEVENbration package offers homeowners an attractive reason to upgrade to one of the most energy efficient units on the market.”

The 7 Series can ramp down to 20 percent of normal operation for ultra-efficient conditioning or up to 130 percent, for periods when extra cooling is needed. The capacity range is the industry's widest and can even eliminate the need for auxiliary heat. The 7 Series also utilizes Aurora, WaterFurnace's next-generation of controls, to continuously monitor and optimize operation. Aurora provides two-way communication between components, robust troubleshooting capabilities and advanced communication protocols.

[Symphony](#), a web-enabled home comfort platform, provides detailed feedback in real-time and the tools to control it from any web-enabled smartphone, tablet or computer. Symphony marries the Aurora controls of the 7 Series with the WebLink router, giving both homeowners and dealers access to unit sensors, energy use and system information from practically anywhere.
